

HD SCOUTING

TECHNIQUES

SMART SCOUT

- Drone captures geo-referenced high resolution images.
- Machine learning (AI) software removes the guesswork.
- Leaf-level precision enables fast and decisive action.

OVERVIEW

- Drone captures an overview video giving the agronomist/farmer a bird's-eye view of each field, looking for man-made patterns, weather stresses, and nutrient issues.
- The combination of Smart Scout + Overview provides the most comprehensive and intelligent IPM program on the market.

SEASON-LONG SCOUTING

- Saves money by only treating areas where there's a problem.
- Season-long IPM solution for all pests.
- This allows for better communication of information, driving timely, fact-based decisions.
- Receive a "scorecard" of how each field performed at the end of the season to help with planning for the next year.
- As needed, boots on the ground confirmation from a certified agronomist.
