MAKE REAL-TIME DECISIONS FOR YOUR FARM USING REAL-TIME INFORMATION

MyFarm Solutions is a software platform powered by Integrated Ag Services. You can use it to closely monitor local, customized grain markets, track field-level weather, access the IAS Yield Trials, and view genetic analysis by environment.

FROM ONE FARMER TO ANOTHER

- Our Team 12

In 1990, after working in the agriculture production business for nearly a decade, I decided to pursue my dream and start Integrated Ag Services. I'm proud of the services and solutions we provide our customers. With today's agriculture challenges and declining profit margins, it's more important than ever to know what's in your soil and how well your crops are performing. Every input affects the bottom line.

We work with our customers as a true partner and advisor to their business. We're an independent, unbiased resource, and our focus is to help farmers make the right decisions based on soil sampling, GXE seed selection, drone scouting and more.

Our experts work with each farmer to develop a customized plan to achieve a new level of precision ag. We know not every farm is the same, nor is every acre. You deserve someone who understands your unique challenges and works tirelessly to find solutions.

We are a trusted partner in your business. We'll consult before planting and advise during and after based on the results.

Contact us to find out why we're entrusted to care for more than 150,000 acres in western Ohio and beyond.

Dave Scheiderer
Owner, Integrated Ag Services

AGRONOMIC SERVICES

Our consultants work with farmers one-on-one to develop a package of agronomic services that is customized to their individual needs.

OUR PROCESS

HD Soil Sampling

- Your fields are accurately sampled without human error and analyzed by an IAS certified laboratory that provides the most reliable and accurate nutrient mapping in the industry.

Consulting

- Our expert consultants use the precision soil sampling results to create high definition (HD) management zones, or Common Production Units (CPUs™), which lead to incredibly accurate and reliable variable recommendations (HD Fertilizer Rx, HD Seeding Rx and HD Nitrogen Rx) and decision management tools. **Because of the IAS independence**, you can choose from any number of suppliers to purchase your input needs. **YOU are in control of your information!**

HD Scouting

Now offering Artificial Intelligent Scouting!

IAS has partnered with Taranis to utilize the Taranis platform to monitor fields quickly and precisely. Combined with AI deep learning technology, it is being used to recognize crop health issues.

- Season long coverage at your fingertips
- Find out the top 10 fields you need to focus on all season long for ACTIONABLE data

Data Management

- Modern progressive farmers are constantly collecting data from many different sources. Whether it's as-planted files, yield files or scouting notes, IAS is there to help turn your data into valuable information.

SOIL LAB

Your fields are accurately sampled without human error and analyzed by an IAS certified laboratory that provides the most reliable and accurate nutrient mapping in the industry.

We take pride in our quality controls all the way from collecting the soil sample in the field to analyzing your soil in our own certified lab.

IAS YIELD TRIALS

For over 25 years, Integrated Ag Services has maintained an unbiased, replicated corn and soybean testing program. Our goal is to provide quality plot results, via the web, to help growers select the very best varieties and hybrids for their farm. Our plot program has grown to be the largest third-party testing program in Ohio and is quickly gaining popularity in Indiana. Our testing program brings out the best of the best in corn and soybean seed.

The IAS Yield Trials is now part of MyFarm Solutions, providing the user one location to reference seed choices along with the developing features of MyFarm Solutions. IAS Yield Trials has become easier to use with added features including a new report called Hybrid Comparison. This report allows the user to select how a specific hybrid or variety compares more directly with other hybrids or varieties.

Varieties and hybrids are either in the Farmer's Choice or Seedsman's Choice category. Every account will now be able to see all varieties and hybrids no matter the subscription level. Farmer's Choice are suggested by the farmer and were grown in our plots. If you would like to suggest a hybrid or variety for next year's plot, please make suggestions using the Farmer's Choice form, which can be accessed using the QR code below. Seedsman's Choice are paid for by the participating company and entered into our plots.

Plot Format

- Randomized Complete Block Design
- Corn – 2 Rows, 30" Width, 20' Row Length
- Soybeans – 2 Rows, 30" Width, 20' Row Length
- Three Replications per Plot
- Corn Starting Population – 33,000
- Soybean Starting Population – 140,000

HD SOIL SAMPLING

Our automated precision soil sampler takes the age-old method of soil sampling, makes it more efficient—and most importantly—more accurate. You get more samples to help guide variable rate technology, leading to better results and higher profits.

WHAT MAKES IT UNIQUE?

Our automated soil sampler takes a sample every half acre, providing two samples per acre. These locations are marked using existing GPS technology, which are used to develop detailed application maps. These maps allow you to apply inputs at a very high level of precision and accuracy.

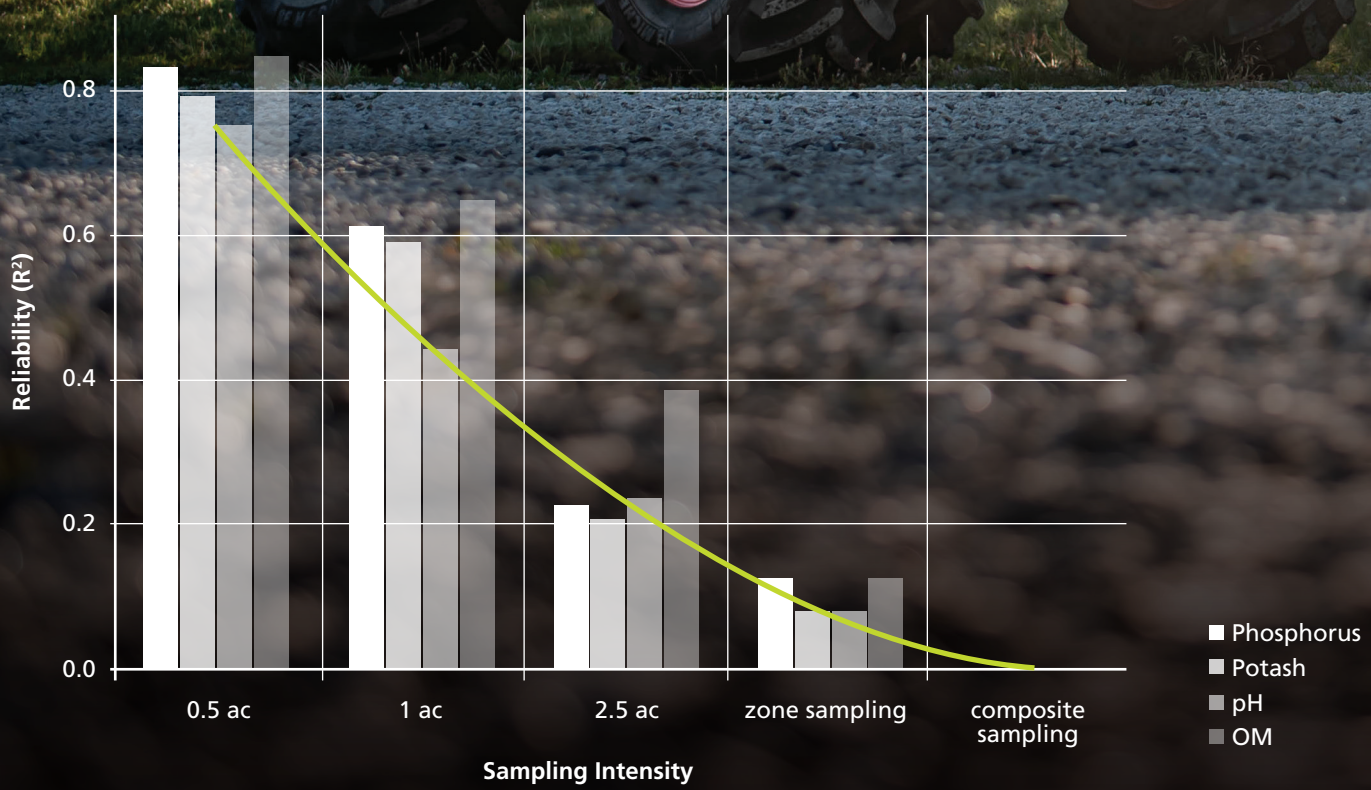

This state-of-the-art technology enables inputs to be tailored to every half-acre, ultimately improving results and increasing profits.

COMPARISON OF SOIL SAMPLING METHODS

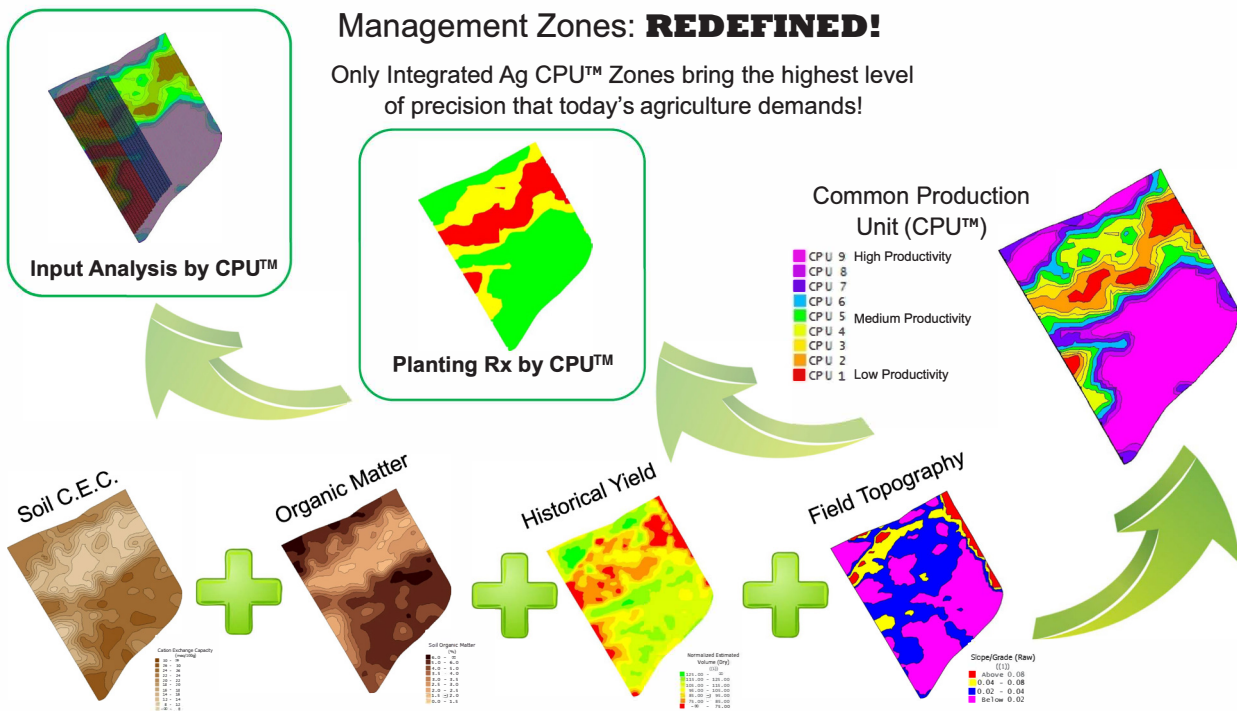

COMBINED SAMPLING INTENSITY STATS

EXPLANATION OF CPU™

Integrated Ag's Common Production Units (CPU™) are used as management zones for various operations such as HD variable rate seeding and HD variable rate Nitrogen applications. The CPU™s are created using various layers of data that are temporally stable: soil C.E.C, organic matter, normalized yield data, and field topography.

Beginning with our HD Sample Collection, CPU's™ accurately map field productivity to drive input decisions.

HD SCOUTING

TECHNIQUES

SMART SCOUT

- Drone captures geo-referenced high resolution images.
- Machine learning (AI) software removes the guesswork.
- Leaf-level precision enables fast and decisive action.

OVERVIEW

- Drone captures an overview video giving the agronomist/farmer a bird's-eye view of each field, looking for man-made patterns, weather stresses, and nutrient issues.
- The combination of Smart Scout + Overview provides the most comprehensive and intelligent IPM program on the market.

SEASON-LONG SCOUTING • 5 Smart Scouts + 2 overview flights

- Saves money by only treating areas where there's a problem.
- Flights start at emergence and continue for approx. 100 days (est. Aug. 20).
- Scoutings occur every 10-20 days, providing season-long IPM solutions for all pests.
- This allows for better communication of information, driving timely, fact-based decisions.
- Receive a "scorecard" of how each field performed at the end of the season.
- As needed, boots on the ground confirmation from a certified agronomist.

OUR TEAM

With more than 140 years of combined experience, the Integrated Ag Services team brings a wealth of industry knowledge to our farmers. We are dedicated to staying abreast of new products, technologies and research to provide expert advice. In fact, six of our team members have committed to undergoing extensive continuous education and training to serve as Certified Crop Advisers.
